Book Synopsis

The definitive "go to" text for Master's and Doctoral level courses on behavioral intervention research. It provides comprehensive coverage of the development, testing, and implementation of novel behavioral interventions in service and practice settings. This handbook provides comprehensive coverage of one of the most under-discussed and understood areas of public health research: developing, testing, and implementing novel behavioral interventions in service and practice settings. It examines the most critical issues related to behavioral intervention research in order to maximize the ability of intervention researchers to successfully implement current and future evidenced-based intervention protocols in targeted practice settings.
